Two Plans Are Better Than One

Traditionally, companies have had the option of adopting either a Defined Contribution Plan, such as a 401(k) Profit Sharing Plan, or a Defined Benefit Plan. Each of these types of plans has advantages and disadvantages to the employer and employees. This article will focus on some of the advantages and disadvantages of certain plans from the employer's perspective.

Combined plans have always been available to companies but few employers utilized a dual plan strategy because of the overall plan limitations. Section 404(a)(7) of the Internal Revenue Code limited the total contribution made to both plans to 25% of eligible payroll. This is the same limit that applies to a stand-alone Profit Sharing Plan. In other words, there was no incentive for companies to offer dual plans when they could achieve the

same tax-deduction using one. Obviously, one plan requires less cost and time to administer and is less complex to communicate to employees. In addition, Profit Sharing Plans may offer more flexibility than traditional pension plans.

The Pension Protection Act (PPA) of 2006 amended Section 404(a)(7) of the code. With this revision, opportunities were now created. Under the new rules, the limitation for combined plans has been relaxed. In 2015, employers can fully fund a defined benefit plan, make salary deferrals to a 401(k) plan and fund their profit sharing plan up to 6% of compensation! This means that companies no longer need to make trade-offs when choosing a retirement plan. They can take advantage of the large tax deductions afforded by a defined benefit plan and still keep the flexibility of a defined contribution plan. The cost of retirement

and the investment risk is shared with employees in the 401(k) profit sharing plan. The employer assumes the investment risk in the defined benefit plan. Disadvantages of stand-alone plans are minimized when running a combined or paired plan. As a result, the benefits are maximized when combining a paired plan.

A paired plan maximizes tax deductions to the owner, while also creating wealth working in a tax preferred environment. The plan also serves to attract, retain and reward key employees. Furthermore, with proper planning, a paired plan can help the continuation of the business and facilitate the transfer of the estate for the business owner.

Defined Contribution Plans

Advantages:

- Employer contributions are flexible and discretionary
- Employees can participate through salary deferral under a 401(k)
- Employees assume investment risk
- Investment options are vast
- No limit as to how much any one individual can accumulate under the plan

Disadvantages:

- Employees are limited to receiving 25% of pay up to \$53,000 in the 2015 plan year

Defined Benefit Plans

Advantages:

- High contribution limits
- Benefits are skewed towards older and higher paid participants

Disadvantages:

- Employer contributions are mandatory
- Fully funded by employer
- Employer assumes the investment risk
- Plan investments are generally conservative since the Employer assumes the investment risk Based on the above, it is easy to understand why over the past two decades so many defined benefit plans have been terminated and replaced by defined contribution plans.

How will you spend retirement?

Paired Plans

When we run a paired plan we are able to maximize the benefits and minimize the shortcomings of each type of plan.

A paired plan can maximize the benefits and minimize the shortcomings of each type of plan. Some of the advantages of a paired plan include:

Higher Contribution Limits:

An employer can take advantage of both the DC and DB Plan limits. These limits may allow highly compensated individuals to receive far in excess of the \$53,000 DC limit. All employer contributions to a qualified retirement plan are tax-deductible to the company and are non-taxable to the employee.

Cost of Retirement is Shared:

Employees can take advantage of the tax-

deductible salary deferral 401(k) contribution and the employer commits to funding the DB plan. In this way the burden of providing retirement benefits does not rest solely on the employer.

Investment Risk is Shared:

Investments held in the 401(k) Profit Sharing Plan are employee directed. Each employee assumes the risk of his or her choices. They may be as conservative or as aggressive as the plan allows. The employer assumes the investment risk of the DB plan only.

Some Flexibility in Contribution:

The defined contribution portion of a paired plan may change from year-to-year. The salary deferral portion is never required and if the non-discrimination testing allows, the employer contribution may be lowered as well.

An employer contribution to the defined benefit portion of a paired plan is required. However, we do have some flexibility as to when that contribution is made. The Pension Protection Act (PPA) of 2006 made it allowable for an employer to fund beyond the minimum contribution in any given year. Employers may fund their plan

up to 150% of the accrued liability.

These contributions are fully tax-deductible. In essence, the pension is accumulating a credit balance. Should the company have an "off-year" fiscally, the company can utilize the credit balance to meet its required contribution to the plan. The ability to

over-fund the plan in good years and carry a credit balance to use in bad years was a major gift of the PPA.

What Type Of Defined Benefit Plan Is Appropriate For Me?

There are many ways to design a defined benefit plan. No one plan design fits all client's tastes, needs or desires. At Heritage, we will work with you to determine a plan design that is appropriate and maintainable for achieving your goals.

It is important to note that regardless of the type of defined benefit plan you choose, all defined benefit plans share common characteristics. First, all defined benefit plans do what the name implies. They are set up to deliver a promised benefit to employees at retirement. This is usually expressed as a monthly benefit or a percentage of pay. The company is responsible for delivering on the promised benefit. The difference between

the various types of plans lie in how the plan achieves the promised benefit.

For instance, 412(e)(3) plans are plans invested in conservative insurance contracts. When funding a plan under a 412(e)(3) design we must assume the guaranteed interest rate on the insurance contracts. These rates are relatively low. In order for the employer to deliver the promised benefit in a lower rate environment, the plan generally requires larger contributions in the early years of participation. As time goes on, excess interest or dividends from the insurance contracts will decrease the required contributions. This type of design is attractive for a company looking to front-

load their contributions and tax deductions.

Traditional Defined Benefit Plans work the opposite way. Traditional plans are usually based on three factors: your age, your salary and the number of years with the company. An employee's benefit grows slowly during the early years, then rises sharply as they grow older, earn more money and accumulate more years with the company. Traditional plan benefits are typically based on a Final Average Pay scale. In this type of plan design, contributions are rear-loaded.

The Cash Balance Advantage

A Cash Balance Plan is more evenly funded because it is based on a Career Average Pay scale. In this way, sharp spikes in income that may occur as an employee approaches retirement will not have as big of an impact on the employer cost as it would under a traditional plan.

Cash Balance Plans offer unique advantages over traditional defined benefit plans. First, they “look” very similar to 401(k) plans. Employees receive an employer contribution equal to a set percentage of their pay deposited into a pooled account.

Employees are guaranteed a set rate of return on this account as dictated by the plan. At year end, they will receive a statement that shows a beginning balance, an employer contribution, a return on their account and an ending balance. The benefit is plain and simple to understand and is appreciated.

Another advantage that cash balance plans offer is the ability to equalize the contribution for partners. Under a traditional defined benefit plan one of the biggest factors in

determining the cost of an employee’s benefit is his/her age. Since partners are often of various ages, contributions are skewed toward the older partners.

This may potentially create resentment from the younger partners and stop the plan design altogether. With a cash balance plan, we can create tiers of employees. As long as the nondiscrimination tests passes, we can allocate different amounts of contribution to the various tiers of employees.

Not every employee must benefit under a Cash Balance and Profit Sharing plan. Under IRS rules, there is an objective test that compares the percentage of Non Highly Compensated Employees (NHCEs) covered under the Plans to the percentage of Highly Compensated Employees (HCEs) covered under the Plan. If the “70% ratio test” is satisfied, then the Plan passes the coverage requirements.

A Highly Compensated Employee (HCE) for 2015 is an employee who owns more than 5% of

the company in 2014 or 2015, is a family member of a more-than 5% owner, or who earned more than \$115,000 in 2014. When you have many employees who earn more than \$115,000, and you exclude them from the plan, it becomes much easier to pass the ratio test and maximize deductions to the owners.

Combination plans can work for many types of businesses both large and small. For companies already sponsoring a 401(k) plan, a Cash Balance Add-on may be the perfect solution to their retirement and tax planning goals.

How will you spend retirement?

Case Study Cash Balance Plan

Here we will examine the economics of a cash balance plan for a small, closely held company. In this example, we are maximizing the contribution for the two owners. In order to pass our non-discrimination tests, the employees must receive 17% of their pay. In this example, the owners receive over 90% of the total contribution.

Name	Age	Compensation	CB Contribution
Owner One	55	\$265,000	\$195,000
Owner Two	50	\$265,000	\$150,800
Manger	40	\$75,000	\$12,750
Clerical	36	\$40,000	\$6,800
Administration	38	\$31,000	\$5,270
Receptionist	27	\$31,000	\$5,270
Driver	24	\$27,000	\$4,590

Adding A Defined Contribution Plan Can Enhance The Design

The Pension Protection Act enables employers to take advantage of a paired plan. In this example the company contributes a 3% safe harbor contribution, an additional 5% to the profit sharing plan and

only 2% for the employees to the cash balance plan. In return, the two owners are able to maximize their 401(k) contributions (including the catch-up provision), receive the total of 6% in the profit

sharing plan & safe harbor and maximize their defined benefit plan. The owners, in this scenario receive 95% of all the money contributed toward the plan.

Name	Age	Compensation	401(k)	Catch-up	SH / NEC	PS	CB Contribution
Owner One	55	\$265,000	\$18,000	\$6,000	\$7,950	\$7,950	\$195,000
Owner Two	50	\$265,000	\$18,000	\$6,000	\$7,950	\$7,950	\$150,800
Manger	40	\$75,000			\$2,250	\$3,000	\$1,500
Clerical	36	\$40,000			\$1,200	\$1,600	\$800
Administration	38	\$31,000			\$930	\$1,240	\$620
Receptionist	27	\$31,000			\$930	\$1,240	\$620
Driver	24	\$27,000			\$810	\$1,080	\$540

Cash Balance Paired Plan With Equal Contributions For Partners

Here we will examine the economics of a cash balance plan for a small, closely held company. In this example, we are maximizing the contribution for the two owners. In order to pass our non-discrimination tests, the employees must receive 17% of their pay. In this example, the owners receive over 90% of the total contribution.

Name	Age	Compensation	401(k)	Catch-up	SH / NEC	PS	CB Contribution
Owner One	55	\$265,000	\$18,000	\$6,000	\$7,950	\$7,950	\$150,800
Owner Two	50	\$265,000	\$18,000	\$6,000	\$7,950	\$7,950	\$150,800
Manger	40	\$75,000			\$2,250	\$3,000	\$1,500
Clerical	36	\$40,000			\$1,200	\$1,600	\$800
Administration	38	\$31,000			\$930	\$1,240	\$620
Receptionist	27	\$31,000			\$930	\$1,240	\$620
Driver	24	\$27,000			\$810	\$1,080	\$540
